

Electronic Solutions for Signature Capture

John
E-Signature

The CSC Group offers an effective method for electronically capturing signatures and integrating them into electronic documents, thereby eliminating duplication costs, multi-part forms, workflow inefficiencies and unnecessary paper storage.

Improving Your Process

Today's companies are continually seeking new ways to streamline business processes and increase overall efficiency. Electronic image capture has helped businesses attain these by eliminating the time and resources associated with paper documentation. All too often, however, documents must still be printed to obtain a signature or initials. These documents are then digitally scanned or copied for a second time. By replacing the printing step with electronic signatures, companies can move towards a more efficient, paperless business environment.

Features

- Developed to augment document imaging and retrieval systems
- Easy to understand user interface
- Customers view signatures as they sign
- Highly visible LCD window
- Mirrors familiar pen and paper experience
- Quick and accurate signature capture
- Small footprint capture pad
- Low maintenance

Benefits

- Improved efficiency
- Improved customer service
- Reduced paper use and storage
- Electronically stored completed documents without digital scanning
- Legally binding, date-stamped documentation

Proven Signature Capture Technology

Our E-Signature solution utilizes Hand Held Products Transaction Team™ 1500 signature capture pad, a backlit LCD signature capture terminal designed specifically for businesses to easily integrate signatures into legally binding documents, enabling a paper-free environment. The HHP Transaction Team 1500 signature capture pad has patented pressure-sensitive screen technology that has been used to successfully capture millions of electronic signatures. Passive pen technology means there are never any expensive electronic pens to replace. Hand Held's manufacturing operations are ISO 9001 or 9002-certified to ensure lasting quality from initial design and development through production and service.

Applications

E-Signature can be used anywhere signatures are required and documents are captured electronically. Potential applications include:

- Authorizations
- Contracts
- Delivery receipts
- Human resource documents
- Leases
- Loan documents
- Point of purchase
- Customer service transactions
